Technical Brief for Bunsy Bloggers

About the Project

Bunsy is a social AI platform for creating, editing, publishing, and promoting short videos and images, with a focus on AI-generated content.

The platform combines:

- A TikTok/Instagram Reels-style feed

- Trending topics based on popular AI videos from TikTok

- A workspace for generating videos and images using neural networks

- An AI agent that can independently analyze trends, write scripts, create content, and publish it

- A built-in video editor similar to CapCut

- AI avatars that can be used by the AI agent to regularly publish videos

The platform's goal is to provide users with a tool that allows them to quickly create AI content, track trends, scale their publications, and automate account management.

We built this for real people, not AI experts. You don't need to know anything about AI, prompts, or which model does what, Bunsy handles that. If you can take a photo and type a sentence on your phone, you can create with Bunsy, no laptop, no technical background, no learning curve. That's the actual point of the app, and it's worth showing that plainly in your content, not just the output it creates.

The Task

Create an original vertical video using Bunsy. The video should have a clear idea, script, or interactive mechanic, and should motivate the audience to try the app, make a remix, or continue the story.

Important: random AI generations stitched together without a unifying idea are not acceptable. Work out the concept first, then execute it in Bunsy.

Themes to Choose From

1. Film a Scene With Me

Create your own AI avatar in Bunsy and place it into an interesting scene: a dance, an interview, an adventure, a fashion show, a music video, or a comedic situation.

At the end, invite your followers to make a remix and film a joint video with your AI avatar.

CTA: Make a remix with my AI avatar in Bunsy.

2. Continue My Story

Create a short AI story with an open ending. Close the video on a mystery, an unexpected event, or the appearance of a new character.

Invite viewers to remix it and show what happens next.

CTA: Make a remix in Bunsy and continue this story.

3. Redo a Trend Your Own Way

Pick a current AI trend and create your own take on it in Bunsy.

Don't copy the original video completely. Add your own character, a different location, a new genre, humor, or an unexpected plot twist.

Recommended structure: found the trend → came up with my own version → showed the result.

CTA: Find a trend in Bunsy and create your version.

4. Add Yourself to My Video

Create an AI scene that leaves room for a second character: a partner, a rival, a guest, someone to talk to, or a fellow participant in an adventure.

Invite followers to add themselves or their AI avatar via a remix.

Examples:

- an open spot on the dance floor
- a second participant in a fashion show
- a partner on a secret mission
- a new character in a sci-fi story
- a rival in a dance battle

CTA: Add yourself to this video, make a remix in Bunsy.

5. Choose What Happens Next

Create a story that ends right before an important choice. Invite viewers to pick the continuation in the comments or make their own version via a remix.

Examples:

- open the mysterious door or walk away
- travel to the past or the future
- trust the character or run
- become the hero or the villain
- step into the portal or close it

CTA: What should happen next? Make your version in Bunsy.

6. Fix My Ending

Create a video with a deliberately unexpected, funny, absurd, or controversial ending.

The beginning of the story should be clear enough that viewers can come up with and create an alternative ending via a remix.

CTA: Don't like this ending? Make your own remix in Bunsy.

7. Pass the AI Challenge On

Come up with a simple action, transformation, or visual technique that other users can repeat with their own AI avatar. The challenge needs a clear rule.

Examples:

- change several looks within one video
- move between different AI worlds
- transform into an unusual character
- repeat a move or a dance
- cross from reality into a fantasy universe

CTA: Your turn now. Repeat this AI challenge in Bunsy.

8. Our Shared AI Series

Create the first episode of a short AI story and invite your followers or another blogger to film the next part via a remix.

The first episode should include: a main character, a clear setup, an unexpected event, and an open ending.

Each following participant can continue the plot, add a character, or change the story's direction.

CTA: This is episode one. Make a remix and film the continuation in Bunsy.

9. Duet With My AI Character

Create an original AI character that starts a dialogue, asks a question, shows a move, or challenges the viewer.

Build the scene so a follower can respond to the character via a remix.

Examples:

- a dance battle
- a musical duet
- a joke interview
- a magic duel
- a competition between characters
- a question the viewer can record an answer to

CTA: Answer my AI character, make a remix in Bunsy.

10. Mix Two Trends

Pick two current AI trends and combine them into one cohesive video. This should be a genuinely new, original concept, not just two unrelated videos spliced together.

Examples:

- dancing animals on a fruit runway

- miniature characters in a futuristic city
- an AI avatar inside a popular visual trend
- a well-known transformation with an unexpected character

CTA: Which two trends should we combine next? Create your mix in Bunsy.

Video Requirements

- Length: at least 15 seconds
- Format: vertical, 9:16
- Quality: Full HD or higher
- The video must be created using Bunsy
- The video must match one of the approved themes
- The video must have one cohesive idea, story, or interactive mechanic
- The first few seconds must grab attention
- The video must have a clear development and a clear ending
- The video must motivate the viewer to use Bunsy, make a remix, or continue the story
- Music, voiceover, and text must match the video's content
- All captions and subtitles must be checked for errors
- The video should be adapted to the blogger's natural, familiar style

If a Blogger Proposes Their Own Theme

An original theme can only be used after prior approval from the Bunsy team.

AI Generation Requirements

Review the finished video carefully before submitting.

The video must not contain noticeable AI artifacts, including:

- extra or disappearing limbs
- deformed faces, bodies, or objects
- an abrupt change in the character's appearance
- clothing that changes inconsistently
- jumping proportions
- flickering or shaking details
- randomly appearing characters
- objects passing through one another
- distorted text or logos
- illogical or cut-off movements
- watermarks from other AI services

If a character appears in multiple scenes, their appearance, clothing, colors, and proportions must stay consistent throughout the video.

If noticeable defects are present, the generation must be reworked or redone.

What Will Not Be Accepted

- Random AI generation with no idea or storyline
- The first generation result, unreviewed and unrefined
- Disconnected, unrelated shots
- A static image stretched across the whole video with no meaningful animation
- Content on an unapproved theme
- A full copy of someone else's video with no original reworking
- Video with noticeable visual artifacts
- Errors in the Bunsy name, text, or subtitles
- Watermarks from third-party services
- Offensive, dangerous, political, or sexualized content

Approval Process

Before creating the video, send:

- the chosen theme
- the idea, in two to three sentences
- a brief description of the beginning, development, and ending
- the planned CTA
- references, if any

Before publishing, send for approval:

- the final version of the video
- the post text
- the cover image
- the date and platform for posting

Publication is only allowed after final approval from the Bunsy team.

Timeline

Date	Milestone
Sep 10 to Sep 15	Content creation window
Sep 15	Draft or rough cut due for review
Sep 17	Final content posted live

Sep 17 is a hard deadline, not a target. Creators confirming after Sep 10 should flag immediately if this timeline is workable before accepting, rather than after.
